Purpose of Inspection:

Checking the progress of the reclamation at the site.

Inspection Summary:

7. Backfilling/Grading (trenches, pits, roads, highwalls, shafts, drill holes)

There was a loader and a small (20-25 ton) haul truck operating when I arrived. They were working on some of the product piles which were located on the upper portion of the site. The material was being loaded, hauled down and dumped into the pit located on the lower portion of the site. These were the only pieces of equipment that were on the site.

I spoke to a Staker Parson employee as I left the site that informed me additional equipment was to be delivered to the site shortly.

The reclamation work had not been on-going long enough to evaluate the work being done versus the reclamation plan submitted by Staker Parson.

Conclusions and Recommendations:

I will continue to monitor this reclamation effort as it progresses.
